

Amendments to the Abstract

Please amend the title and the following paragraph that appear on page 23 of the specification as follows such that the underlined portion below is added, and the paragraph is amended as shown below:

METHODS AND SYSTEMS FOR DYNAMICALLY CONFIGURING A NETWORK
COMPONENT TO REROUTE MEDIA STREAMS

A method for dynamically configuring a network component to reroute media streams is disclosed. The method includes receiving a request for content from a first network connected component and determining a type of media service needed for at least a portion of the content. Moreover, the method includes configuring a network data relaying component to forward at least a portion of the content from a second network connected component to a third network connected component.
